NICOLE KEENEY

RESUME SUMMARY

Fast-learning, detail-oriented geospatial data scientist with a background in computational earth science research. Highly qualified with python data science modules for visualization, wrangling, and statistical analysis of climate model and remote sensing data.

WORK EXPERIENCE

UC Berkeley School of Public Health, Division of Environmental Health Sciences

Junior Specialist (half-time) *Jan 2021 – Feb 2022*

Undergraduate Student Researcher *Oct 2020 – Dec 2020*

- Calibrated a wind erosion model in California using remote sensing-derived vegetation data.
- Performed data extractions and zonal statistics using python and R for various environmental datasets utilizing a high performance computing environment.

University of Maryland / NASA Goddard Space Flight Center

Faculty Research Assistant (half-time, remote) *Jan 2021 – Jan 2022*

- Developed a cloud-optimized python toolkit to streamline polar climate model validation using satellite data. Project emphasized interactive plotting techniques and data management with Google Cloud and zarr.

NASA Goddard Space Flight Center, Cryospheric Sciences Laboratory

Summer Intern (remote) *June 2020 – Aug 2020*

- Built an interactive Jupyter Book to highlight python code for evaluation of potential drivers of winter sea ice growth in the Arctic.

UC Berkeley, Department of Environmental Science & Policy

Undergraduate Student Researcher *Oct 2019 – Dec 2020*

- Conducted original research for an undergraduate honors thesis where I evaluated a drought index using eddy covariance flux measurements and a planetary boundary layer model.

Berkeley Air Monitoring Group

Air Quality Intern *Feb 2018 – Sep 2018*

- Performed air quality instrument repair, calibration, and management, including laboratory testing.
- Analyzed quantitative and qualitative health data related to indoor air pollution and impact evaluation.

EDUCATION

Atmospheric Science, B.A.

University of California, Berkeley

Aug 2017 – Dec 2020

GPA: 3.7

SKILLS

- Python (xarray, pandas, numpy, matplotlib, scipy, cartopy, bokeh, zarr)
- R (netcdf, stars, raster)
- Data visualization
- High Performance Computing
- Google Cloud & Colab
- Model Development & Validation
- Time Management
- Science Communication
- Spanish (conversationally fluent)
